Application/Control Number: 10/672,021 Page 2

Art Unit: 1771

1. Claims, 8, 11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 8, it is not clear what is meant by "NWF". Also, while PVC is a generally used abbreviation for polyvinyl chloride, it is preferable that all the words in the claim be spelled out rather than abbreviated so that the claim is as clear as possible.

In claim 11 it is not clear what is meant by "hairs". Does this refer to a pile surface?

Flocked fibers? Any type of fabric? The claimed structure is unclear.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1-11, 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Brown et al, U.S. Patent No. 6,100,208. Brown discloses an outdoor protective fabric which comprises an inner layer of nonwoven fibers, an outer layer which can comprise a woven or nonwoven fabric which is combined with the inner layer through a barrier layer and/or by extrusion. See col. 6, lines 43-65. The barrier layer is a water impervious layer and may comprise films, foams, non-porous films, micro-porous films and micro-porous nonwoven materials. Suitable films may comprise polyethylene, polypropylene or polyurethane films. See col. 9, line 58 col. 10, line 48. The outer layer may comprise a woven web, knitted fabric, spunlaced material, bonded carded webs, needles punched material or spunbonded nonwoven webs. The outer layer fabric may

Application/Control Number: 10/672,021 Page 3

Art Unit: 1771

be formed from polyolefins such as polypropylene or polyethylene. See col. 10, lines 48-65. The woven fabric would necessarily meet the limitation of the interlacing of the yarn being at substantially 90 degrees, (claim 3), the nonwoven fabrics would inherently meet the limitations regarding the fibers being interlaced obliquely, (claim 4). While Brown discloses that the outdoor fabric can be used as a car cover, it is noted that the limitations regarding the use of the vehicle as well as the limitations regarding it's suitable for being withheld and blocked do not recite any structure and therefore do not further limit the claims. With regard to claim 11, since Brown teaches a nonwoven web as the interior layer formed from microfibers, these fibers would correspond to the claimed hairs. With regard to claim 20, since this claim is a statement of an intended use of the fabric, it is not given patentable weight, (i.e. a fabric is claimed, not a packaged item).

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Brown et al, U.S. Patent No. 6,100,208. Brown differs from the claimed invention because Brown does not teach the length of the claimed hairs. However, since Brown teaches employing meltblown microfibers to form a soft inner layer, it would have been obvious

Application/Control Number: 10/672,021 Page 4

Art Unit: 1771

to have selected the particular lengths of the microfibers through the process of routine experimentation in order to form a fabric having the desired softness and hand.

6. Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brown et al, U.S. Patent No. 6,100,208 in view of Gillem, U.S. Patent No. 5,029,933 and JP 20000108685. Brown et al discloses a protective cover for vehicles as set forth above. Brown et al differs from the claimed invention does not disclose attaching various straps and securing means for attaching the cover to the vehicle, does not teach configuring the cover to particular vehicles and does not teach the use of hook and buckles for attaching the cover to the vehicle. Gillem teaches that car covers can be formed which are configured to a particular car shape and that such covers can employ straps to hold the cover onto the vehicle. See abstract, drawings, as well as col. 2, lines 58 – col. 3, line 18. JP '685 is cited to show that buckles can be used in conjunction with the other fastening means for securing the cover onto the vehicle. See abstract. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have employed straps, hooks and buckles to secure the car cover to the vehicle in Brown. It further would have been obvious to have shaped the cover so that it corresponded to a particular vehicle shape. One of ordinary skill in the art would have been motivated to shape and secure the cover to the vehicle as taught by Gillem by the expectation that this would enhance the protection provided by the cover by attaching it more securely to a vehicle whose shape the cover mirrored.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Elizabeth M. Cole whose telephone number is (571)
